Ferns

winter-hardy varieties

Ferns are one of the evolutionarily oldest plants on Earth. They inhabit a variety of climatic zones, from tropical rainforests to the shady forests of the temperate zone to the Siberian taiga.

The ferns we offer are suitable for growing in zones 3 to 7, which makes it possible to select a range for most gardens and, in terms of production, poses no major problems when plants are overwintered in the nursery. The natural ability of ferns to grow in areas with little sunlight makes them an excellent alternative for planting in shady and semi-shaded parts of gardens and landscaped areas.

The variety of colours, textures, heights and habit makes it possible to use ferns interchangeably with other plants that lack sufficient light to fully vegetate and flower satisfactorily. Ferns are therefore an excellent complement to the range on offer, which naturally translates into greater sales opportunities.

The ferns young plants are offered in T-84 trays, which helps to reduce your production time. Check out all our range of highest quality ferns, perennials and grasses young plants at www.vitroflora.com

STANDARD:

Tray T-84

substrate plug \varnothing 3,5cm

sales week: 19 ÷ 30

The offer is available at: www.vitroflora.com/ferns

71169 | **Adiantum pedatum**
| 30 ☼ 3

71170 | **Arachniodes miqueliana**
Broad Holly Fern
| 50 ☼ 5

71171 | **Asplenium scolopendrium**
| 50 ☼ 4
